Smart Contract Audit Report
Contract Information
Smart Contract Name: DelegatedWithdrawal
Version: 0.8.18
License: MIT
Compiler Version: solc-0.8.18
Audit Summary
This audit report provides an assessment of the "DelegatedWithdrawal" smart contract, version 0.8.18. The audit was performed based on the provided contract source code.

The audit did not identify any security or functional issues in the contract. The contract appears to be well-designed, with appropriate checks and comments to facilitate understanding.

Detailed Findings
Issue 1: **No Security or Functional Issues Found**

Recommendation: No specific action is required for this issue as it serves as an informational notice.

Conclusion
The "DelegatedWithdrawal" smart contract has been audited, and no security or functional issues were identified. The contract appears to be well-designed and follows best practices for handling delegated withdrawals. It ensures that only the Delegator contract can initiate withdrawals, and proper checks are in place to prevent unauthorized access.

This audit report is based on the provided source code as of the knowledge cutoff date, and it is essential to review and test the contract in a real-world environment to ensure its security and functionality. Additionally, any changes or updates to the contract after the knowledge cutoff date are not considered in this report.
